TITLE : NIPPERS FOR HOLDING COOKER

ABSTRACT : PROBLEM TO BE SOLVED: To provide nippers that make it possible to firmly hold and remove a large-sized cooker which cannot be held by one hand with no danger of burns or scalds.

SOLUTION: Two pairs of nippers of the same configuration are used as a set. When the actuation lever 4 is grasped against the body 2 of one pair of nippers 1, the rotational motion of the actuation lever 4 is converted into the linear motion of a movable member 6 in cooperation of a power transmission tool comprising a rotating member 17 and a guiding member 18. A movable holding part 11 integrally formed on the movable member 6 is moved toward a fixed holding part 9 integrally formed on the body 2, and thus the upper rim of the circumferential wall of a cooker 7 is firmly clamped between the movable holding part 11 and the fixed holding part 9.
